Chapter 1: Squatting Bodyweight Exercises

1 - Vertical Shin Squat

Orsy is grabbing on to something. She is leaning back. She is really working on keeping that shin vertical, so nice and upright and coming back down. So ideally, she is coming down to the point where her hips are just below her knees and coming back up. Now if you can't go that far, you can start off with whatever range you can. You can start quarter and back up and then you can work your way further and further.

Vertical Shin Squat

The shins being vertical put the least amount of stress within that knee joint. As that shin comes more forward, it puts more stress on that knee joint. Doing the vertical shin squat is easier on the knees than the regular squat. You can utilize your bodyweight and just grab on to something that isn't going to move.

2 – Wall Fist Pushup

Wall Fist Pushup

In this exercise, we utilize the wall. Orsy's at a little bit of an angle so you don't to be at a super steep angle. She got her hands in a fist because I want to use the fists to keep the wrist in a straight line. When you do a typical wall pushup, it really brings the wrists, the hands back and that puts a lot of strain on the wrists. With the elbows, I want Orsy to have her upper arm away from her body about 30 to 45 degrees. She is going to do the pushup movement, pivoting at the toes, rest her body in nice straight line. She is tight in the abdominal area, coming towards the wall and coming away. When she comes away, she is straightening out the arms all the way so not locking them up but straight and coming back into it.

3 – Step Calf Raise

Step Calf Raise

Orsy is just going to use the step of this platform. We are going to go bilateral, so go two legs. Orsy is dropping the heels down as far as she can and coming all the way up. We are working on is strengthening that calf muscle throughout the full range of motion when it comes to that ankle joint. She is grabbing on to something because we are not really worried about stability. We are nice and upright. We are working on strengthening throughout that ankle joint because if we have good strength around that ankle joint, it helps to balance in the foot and the ankle as well as help strengthen that knee from below. It complements the vertical shin squat. We are really focusing on that knee joint and hip joint. We are strengthening the muscles around the hip, the knee and the ankle joint.

4 – Single Leg Squat

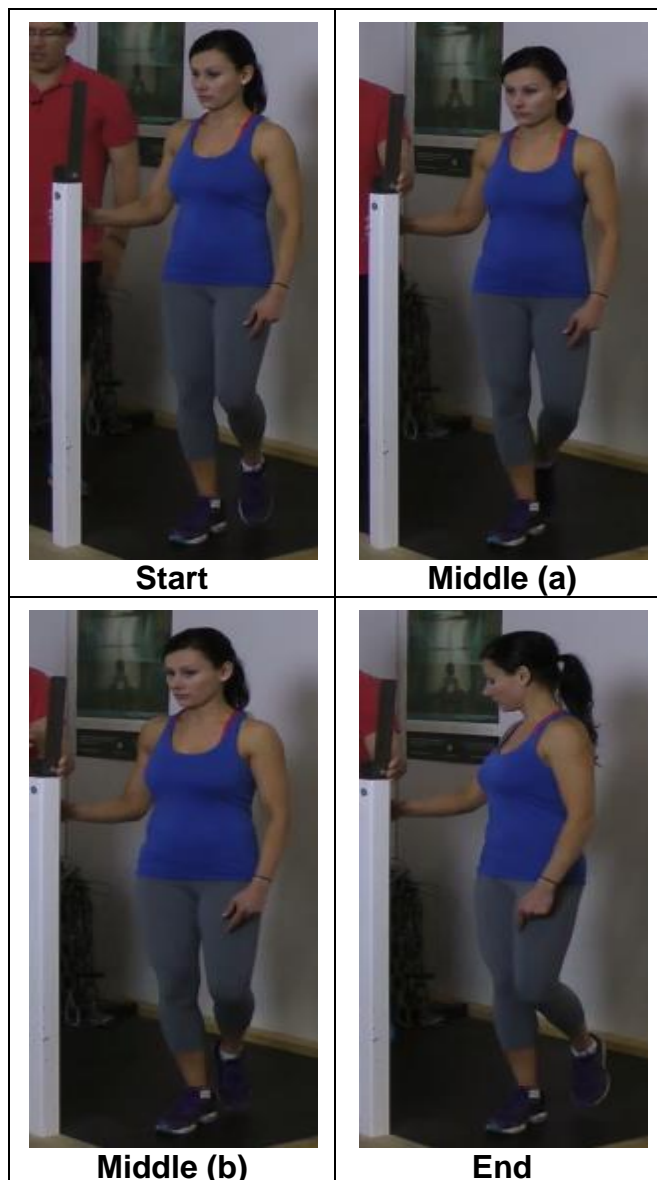

Orsy's got her weight evenly over her foot, maybe a little bit more on the back part of it, standing on one leg. She is going to squat down and come back up. She is bending the knee and then bringing the body forward. She is hinging at the hips. It will be a lot more challenging than that vertical shin squat and you should really feel it throughout that knee and hip area.

Single Leg Squat

If you can't go as deep as Orsy, there are two things that you can do. You can decrease the depth, so you can just quarter ways and back up. Build that depth because if you go to the point that you can, you get a carry over when it comes to strength. So if I go to 90 degrees, I build muscle when it comes to that joint angle around 30 degrees. If all I am doing is strengthening at 90 degrees, I am actually strengthening a lot more of that range of motion.

5 – Hip Rotator Exercise

Hip Rotator Exercise

Orsy is standing; weight is even on the foot. She is lightly bent in that knee and her body is pointing at 12 o'clock. She is going to move her upper body from 11 o'clock to 1 o'clock so it ends up being a small movement. We are working on those hip rotators. With a lot of people, they are weak in those hip rotators. Weak hip rotators put more stress on the hip and knee joint. So it's not a very big movement. It's going from that 11 o'clock to o'clock and you are going to start off with just getting used to that movement. You just have to move side to side a little bit and then you can move to that 11 o'clock to that 1 o'clock. Orsy is grabbing something for support. You can take your hand away from that and go through the movement. We don't want to twist excessively in that knee joint.

The first part focuses a lot more in the foot, ankle, knee and hip area. We will now move on to the next group of exercises in the Bodyweight Joint Rehab program.

Chapter 2: Wall Bodyweight Exercises

We are going to head into the second group of exercises when it comes to the Bodyweight Joint rehab program. With these exercises, we are really focusing on the core which helps the back, the hips and the shoulder. We are also targeting that core area in multiple dimensions so we are not just focusing on our strongest which is forward and back. We are going side to side and we are also working on rotation.

6 – Front Wall Plank

Orsy is resting on her forearms up against the wall and her forearms can go like a 30 degree angle or a 45 degree angle. They don't need to be straight up and they don't need to be straight across, 30 or 45 degree angle and the angle of her body can be whatever she'd like. If you want to make it more challenging, you can move your feet further away but start off with what you can do comfortably with perfect technique.

Front Wall Plank

Your elbows are ideally below your shoulders, shoulder joint. If they are too high, there will be too much stress on your shoulder and on your neck. When it comes to your abdominals, you have got your abdominals braced or tight. What I mean by bracing is, you are bracing your abdominals, you are tightening your abdominals like you are bracing for a punch like so if someone's going to punch you in the stomach, you are going to brace and protect yourself. With the rest of your body, you are tight in the quads and the hamstrings and you are tight in the gluts and you can come back. We are really focusing on the satal plane which is the forward and back plane.

7 – Side Wall Plank

Side Wall Plank

We have got the forearm resting up against the wall, elbows a touch below the shoulder height because we don't want to bring in those upper traps and put too much stress on the shoulder and in the neck. The body is at whatever angle is challenging for you. Orsy can make it further by increasing the steepness of her body and now she is challenging things in that side to side plank. So just like the Front Wall plank, she is tight in the abdominal areas. She has got some tension on her quads and hamstrings and her gluts. She is going to hold that position for a period of time. And with the front wall plank and the side wall plank what I get people to do is to hold the position for about 5 seconds and do 10 repetitions.

8 – Front Wall Plank with Knee Lift

Front Wall Plank with Knee Lift

We go back to that Front Wall Plank position and now we are lifting the knee, so bringing the knee to just below hip height and then coming back. So the rest of the body is in nice good alignment and that core is activated. We are educating the body between hip movement and back movement so we are stabilizing the back and we are working on moving that hip. Also with going onto one leg we work on that stability in that hip area which is important to have good stability in that hip and good stability in that core area and back. This will help when it comes to rehabbing and overcoming ankle injuries, knee, hip, back and shoulder injuries. So it's very important.

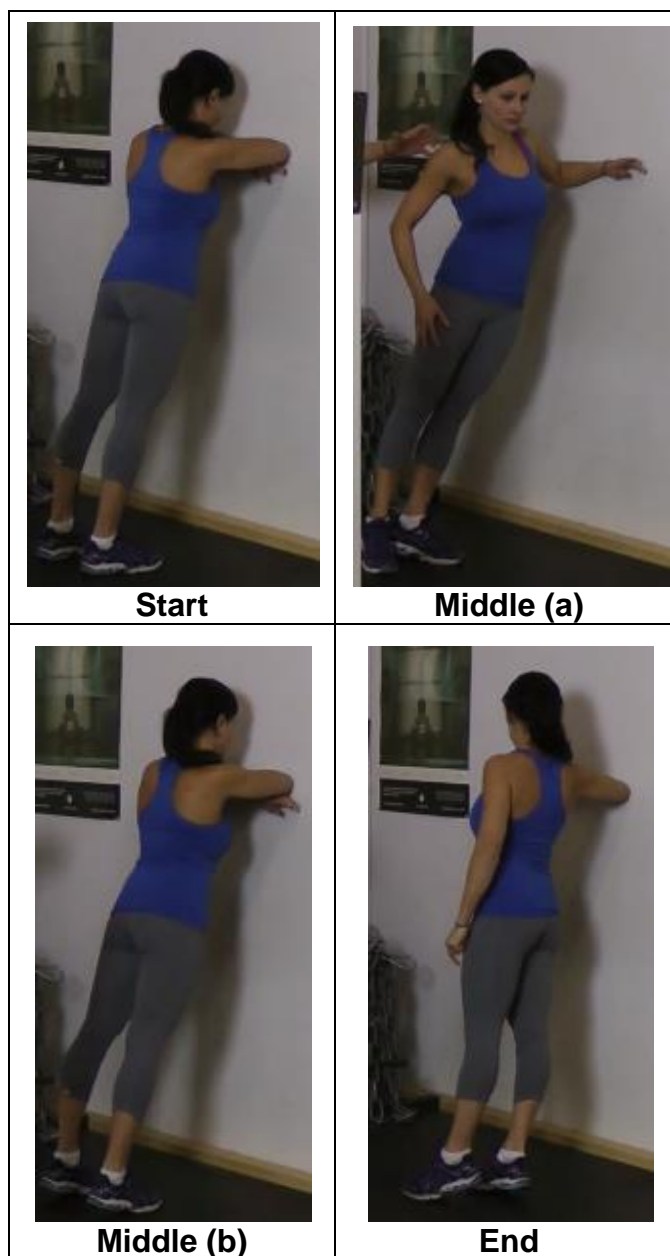

9 – Side Wall Plank with Leg Lift

Side Wall Plank with Leg Lift

We are going to a Side Wall Plank progression. So just the same setup as that Side Wall Plank and with this one now Orsy is going to lift her leg out to the side and lifting about 30 degrees to about 45 degrees. She is tight through here, her hips aren't moving, her leg is the only thing moving. She is in a good straight line from the side, a good straight line from behind and that forearm is resting against the wall, elbows are a touch below the shoulder. She is holding that position and going through all 10 of the repetitions.

10 – Front to Side Wall Plank

Front to Side Wall Plank

Orsy is now got her forearm stacked. Her elbows are touch below shoulder height to decrease the stress on the upper traps, shoulders and neck. She is going to start from that Front Plank position and hold it for 5 seconds. She is going to move into a Side Plank holding that for 5 seconds and moving into the front plank. So it's common for people to be stronger and weaker on one side when it comes to the Side Plank, that's normal. I am getting Orsy to go back and forth and we are looking at ideally 5

Exercises for Stronger Joints

repetitions on each position. So 5 on the left side, 5 in the front, 5 on the right side and when it comes to the front plank it will probably end up being about 10.

Chapter 3: Floor Bodyweight Exercises

Okay, now we are in the third group of exercises of the Bodyweight Joint rehab program. So we move down to the mat.

11 – Superman with Alternating Arms and Legs

I am going to Orsy to move into a fore plank position. Hands are underneath the shoulders, knees are underneath the hips. Her head is looking down so just in front, in between her hands and the rest of her body is in a good straight line. She is going to tighten her abdominal area like bracing for a punch again. She is going to reach with one arm and then reach back with the opposite leg. Nice smooth movement and then she is going to switch sides and she is going to go back and forth.

Superman with Alternating Arms and Legs

I just want movement in the shoulders and she is going to go back and forth, nice, slow and controlled movement. She is going to end up doing that 5 times on each side so a total of 10. We are working on that abdominal area, working on challenging that

Exercises for Stronger Joints

transverse plane or rotational plane. We are working on the stability in the hip. We are working on the gluts and the hamstrings. We are working on the stability in the shoulder and the neck. The muscles in our neck have to control the weight of our head. We are working on those neck stabilizers.

12 – Bridge with a Snow Angel

Orsy is going to move into a bridge position and then she has hands on the side. She is lying on her back, her feet, her legs are about hip width apart. She has got to tighten up her abdominal area. She is going to lift her seat up and then she is going to move her arms overhead and then come out to the front down to her side and then back out. I am going to get her to do about 5 snow angels.

Bridge with a Snow Angel

She is tight in the abdominal area, trying to keep her knee, hip and shoulders in good alignment and one more time. We are really working on the gluts and the hamstrings and that core. We are strengthening around that hip joint, and that low back. We are also working with the gluts and the hamstrings. We are strengthening around that knee and then adding the snow angel. We are working on all those little muscles around the shoulder blade.

13 – Seat Hover

Seat Hover

Orsy is lying back and straight. So the legs are underneath her hips. She is in a good straight line and now she has tightened up her abdominal area. She is going to work on pushing down with her heels and lifting her seat off the ground. We are working on the gluts, hamstrings and a little bit in that calf area. So I am going to get her to lift up for a couple of seconds and then come back down. She is going to do about 10 repetitions of those. Hold for about 2 seconds and then you can progress to 5 seconds.

Chapter 4: Final Wrap Up

So there you go, that ends the Full Bodyweight joint rehab program. With all of those 13 exercises, we are working on using our own bodyweight to strengthen different joints within our body. We looked at strengthening around the ankle joint, knee joint, hip, back, shoulder and head. We have covered the whole body when it comes to using our bodyweight to strengthen around all of our joints.

Give that program a go. It's a low intensity workout so what you can go through each of the exercises once throughout at one time. Check to see how you feel and then you can work your way through that program each of the exercises three times. So going through it once will probably take you roughly about 15 minutes. If you run through it 3 times it will be around 45 minutes. You can increase the intensity or decrease the intensity with the different options that we went through in this video.

About Rick Kaselj

Rick Kaselj, M.S. (Exercise Science), B.Sc. (Kinesiology), PK, CPT, CEP, CES

Hi, I'm Rick Kaselj. **I create exercise programs that help people heal injuries and eliminate pain, so they can go back to living a full, active, healthy life.**

I've always been a fitness and exercise enthusiast, so starting in 1994, I decided to make this my career also. I started as a personal trainer, exercise therapist and kinesiologist, but quickly discovered that many of the traditional exercise and treatment programs weren't producing the results I wanted for my clients...

...so I took it upon myself to get the right knowledge, scour the medical research, and do hands-on testing, so I could ACTUALLY help my clients get better.

With the advent of the Internet, I saw a terrific opportunity to offer and deliver my programs to many more people, so they too could finally get relief from pain, heal their injuries, and get back to the lives they enjoy.

I USE RESEARCH, STUDY, AND HANDS-ON TESTING TO FIND WHAT REALLY WORKS TO HEAL INJURIES AND ELIMINATE PAIN.

I'm all about finding what works... and unfortunately, a lot of the advice out there, even from trained professionals and reputable sources... *does not work!*

Some of the most effective methods I've discovered for eliminating pain and healing injuries are counterintuitive... and they required diligent research, testing, and creativity to discover.

People get the best results when they follow a program that's been properly designed. The best programs include only the exercises that are necessary, instructions for how to perform them properly, the proper order in which to perform them, and instructions for what the right amount of rest is, and when to take it. Not doing all the steps, or performing them in the wrong order, or taking too little rest, or too much, can throw you off course, and sometimes even make things worse!

I've learned that understanding the CAUSE of injuries and painful conditions can help heal and prevent them. For example, most people don't realize that they're doing certain things every day that put stress and tension on certain muscles, tendons, tissues and joints, and over time, this creates chronic pain and injury. Simply becoming aware, and then making tiny adjustments, can actually result in a much higher quality of life for many people.

All of my injury and exercise programs were developed as a result of my research, study and years of hands-on testing and training:

- I've been in the fitness and rehab industry since 1994.
- I spent 6 years at University studying kinesiology, corrective exercise and therapeutic exercise, and got my Master's Degree in exercise science.
- I have 16 years of hands-on experience, working directly with clients and teaching my techniques and programs to fitness professionals, Kinesiologists, and healthcare providers.
- I've conducted thousands of personal training sessions.
- I've carefully scrutinized hundreds of relevant medical research papers.
- I'm also an author and speaker and I've given over 260 presentations to more than 5,000 fitness professionals across Canada and USA.

WHAT MY CLIENTS AND CUSTOMERS SAY:

“Your exercises have changed my life. I have been in constant pain for 15 years.” ***Shelley Watson, Carmel, CA***

“I just wanted to say thank you for providing what I needed to resolve my hip problem! After following your exercises, I went through work all day with no pain and no pain medication. Yeah!! Thanks so much for a simple answer to a problem I have been dealing with for months.” ***Tracy Walker, North Carolina***

“Before I used the information, I couldn’t walk normally for at least the first 15 minutes each morning. After using the program, I only have a little pain, but it eventually all got better with continued attention.” ***Cher Anderson, Athens, TN***

“Thank you Rick, you saved my career!” ***Marco Mura, Professional Forester, Sardegna, Italy***

“I used the 90 second pain relief alone and it helped relieve the pain right away and after playing sports I feel better and the pain is not as intense. I thought I would just have to retire due to the foot pain, but I now see there is hope with your program it has helped me a lot.” ***Audal Acosta***

I HAVE A FREE GIFT FOR YOU...

THAT WILL START DECREASING YOUR PAIN NOW!

Before we go any further, I want to send you some of my very best stuff FOR FREE!
It's my introductory gift to you. (I like to give value first, and be as helpful as I can upfront.)

My newest DVD is called "The Pain Hacker" and **I want you to have it for free.**

What is it? It's an extensive collection of 90-second pain fixes that you can do to start reducing the pain you have right now. On the video, I go through each technique slowly and carefully to show you exactly how to do them, so you can start reducing your pain and get back to a healthy, more active life.

I don't want to give away too much here, but...

- "The Pain Hacker" DVD contains 90-second pain fixes for shoulder, back, knee, elbow, foot, neck, wrist, hip, hand pain, and much more.
- The pain techniques in this DVD will work for you regardless of your current health condition, gender or age!
- With your free DVD, I'm also going to throw in two bonus programs that will teach you simple exercises that could radically change the way you feel, day-to-day.
- My unconventional "Pain Fixes" in your free DVD have been featured and talked about in these publications (and more).

Get your FREE DVD at: www.ThePainHacker.com/free-DVD-2

Other Products from Rick

Heal Rotator Cuff Injuries FAST

This comprehensive toolbox of 57 rotator cuff- specific exercises is **EVERYTHING** you need to help your clients decrease pain, improve range of motion, and increase strength in their rotator cuffs. Here are just a few of the things you'll discover:

- Why exercises that strengthen rotator cuffs do not necessarily decrease pain and increase range of motion in your clients' shoulders
- Why you shouldn't give the same exercises to every client with rotator cuff problems
- How to PROPERLY design an exercise program for the rotator cuff (I spent an entire year researching this at university, and wrote and published a paper on it in the Canadian Journal of Kinesiology)

Learn more at: www.EffectiveRotatorCuffExercises.com

Scoliosis Secrets

In just a few weeks, your Scoliosis patients will be thanking you! This program delivers the knowledge and exercises you need to safely and effectively train or heal anyone with Scoliosis. Here are just a few samples of what you'll learn and get in this program:

- The Three 'O' medical treatments for Scoliosis, and step-by-step instructions on how to do them
- The 7 different types of Scoliosis... how to diagnose your clients... and which exercises to prescribe for each
- CLIENT HANDOUTS that you can copy and give to your clients, completely DONE FOR YOU!

Learn more at: www.EffectiveExercisesForScoliosis.com

Scapular Stabilization Secrets

This is the RESEARCH- BACKED exercise program that will finally help your clients decrease pain, improve range of motion, and increase shoulder stability. What will you learn?

- My secret weapon for healing shoulder injuries
- Why most trainers and therapists focus on the rotator cuff in a shoulder injury, when they should focus on improving the activation, endurance, and strength of the scapular muscles
- Why your Scapular Stabilization exercise program is a waste of time... unless it includes all 5 of these components

Learn more at: www.ScapularStabilizationExercises.com

Eliminate Calf Pain (Achilles Tendinitis and Tendinosis)

Do you have recurring pain in your calf? Have you been diagnosed with Achilles Tendinitis or Tendinosis? If so, my research -backed video exercise program is for you! Simple step-by-step videos take you through a specially -designed program to eradicate your calf pain, Achilles Tendinitis, and Tendinosis ONCE AND FOR ALL. You'll be back to hiking, walking and running before you know it. Here's a small sampling of what you'll learn in the program:

- QUICK START (non-exercise) techniques you can use to start melting your calf pain away RIGHT NOW
- ALL the exercises you need to eliminate your calf pain... AND I'll tell you the exercises that are commonly prescribed, but you don't need to worry about
- How to do each exercise, with slow, step-by-step instructions... the correct order you should follow... and how much rest you should take... to get the best and fastest results

Learn more at: www.AchillesTendinitisExercises.com

Eliminate Piriformis Syndrome

The step-by-step exercise program that ANYONE can do... that heals your Piriformis Syndrome, and allows you to: take long walks again, watch entire movies without getting up, easily lift your child... all without any pain. Here are just a few samples of what you'll learn and get in this program:

- Why you need to do more than just strengthen your core to eliminate your Piriformis Syndrome
- How to start decreasing your pain IMMEDIATELY, WITHOUT ANY EXERCISE
- These stretches and exercises are making your Piriformis Syndrome WORSE

Learn more at: www.PiriformisSyndromeSolution.com/end-piriformis-pain

Fixing Tight Hip Flexors

This video program has 35 exercises and other techniques designed to help you overcome painfully Tight Hip Flexors... without expensive appointments, drugs, or surgery. You'll be back to walking, running, and creating fun memories with your friends and family in just a few weeks! Here's a small sampling of what you'll learn in the program:

- THE SINGLE MOST IMPORTANT movement you need to do in order to overcome your Tight Hip Flexors (it's Component #8 in the program)
- Why it's important to decrease stress and tension in your knee, in order to fix your tight hip flexors... and how to do it properly
- The 8 CRITICAL COMPONENTS that must be included in any effective program for fixing Tight Hip Flexors (these components come from 16 years of hands-on experience and careful scrutiny of 30 separate medical research papers)

Learn more at: www.FixingTightHipFlexors.com

Heal Back Pain (Gluteus Medius Strength Program)

This exercise program **ELIMINATES BACK PAIN** by strengthening your Gluteus Medius. The Gluteus Medius is often ignored, but when properly exercised and strengthened, it can stabilize your pelvis and decrease stress on your back, which eliminates back pain. In this program, you'll learn these things (and much more):

- How to eliminate your back pain as quickly as possible (HINT: you must do the exercises in the right order so they build on each other and your progress is multiplied!)
- What most trainers and physical therapists don't know about back pain and the Gluteus Medius
- Why exercises that target your knees and hips also strengthen the Gluteus Medius and help with back pain

Learn more at: www.GluteusMediusExercises.com

Best Gluteus Maximus Exercises

This is a fast, simple, safe, and effective program for improving your Gluteus Maximus. Most health and fitness professionals don't know about this program, or are doing it wrong. In as little as 7 days, you can go back to pain-free walking, running and living! Here are a few samples of what you'll learn in the program:

- Stretches and exercises that actually make your Gluteus Maximus **WORSE**
- Common mistakes people make doing Gluteus Maximus exercises
- The correct form for all of the exercises, shown step-by-step on easy-to-follow videos

Learn more at: www.BestGluteusMaximusExercises.com

How To Speed Up Recovery Between Workouts

WITHOUT SPENDING A CENT!

Do you want to get better results from your workouts? Experience fewer aches, pains and injuries between workouts? Spend less time and money at the massage therapist? This comprehensive video program is going to help you achieve all that and more. Here are just a few of the things you'll be learning:

- What you should NEVER do if you have aches and pains between workouts
- 3 techniques and unconventional tools that RAPIDLY speed recovery between workouts
- How to get the powerful recovery effects of massage,

Learn more at: www.RecoveryWorkouts.com

No More Neck Pain

neck... not just a temporary fix

- What I learned working with hundreds of clients with neck pain that most other professionals will never know

What if you could PERMANENTLY end your neck pain? This INNOVATIVE video program will teach you the simple movements and proven exercises that will make that a reality for you. Here are a few of the things you'll learn:

- An UNUSUAL technique that can start melting your neck pain away IMMEDIATELY
- How to get lasting, long- term relief for your

Learn more at: www.NeckPainSolved.com

Erase Foot & Heel Pain (Plantar Fasciitis)

How do you eliminate Plantar Fasciitis? Do the right exercises, in the right order, with the right amount of rest. This simple, 12-week program gives you EXACTLY what you need to permanently erase your foot and heel pain. Here's a small sampling of what you'll learn:

- Why trying to strengthen your plantar fascia is a common mistake, and only makes your heel pain WORSE (hint: the plantar fascia is not a muscle!)
- One simple technique that anyone can do... that will get rid of your Plantar Fasciitis MUCH

FASTER

- How to match the right exercise routine to where you are in your recovery, so you get the best results, in the least amount of time

Learn more at: www.PlantarFasciitisReliefIn7Days.com/home11

Eliminate Thoracic Outlet Syndrome

FINALLY... a simple, but effective program to overcome your Thoracic Outlet Syndrome... without expensive appointments, drugs, or surgery. My easy-to-follow, step-by-step videos and guides will help you GET PAIN- FREE in as little as 7 days. Here are just a few examples of what you'll learn in my program:

- A strange exercise I discovered using a SMALL BALL... that erased hand numbness in LESS THAN ONE MINUTE
- How to properly adjust the intensity of each exercise you do, so you can recover as quickly as possible, but also make sure you don't re-injure yourself
- The exercises you should NEVER do if you have Thoracic Outlet Syndrome

Learn more at: www.ThoracicOutletSyndromeSolved.com

Eliminate Pain After Your Knee Replacement

This program is perfect for getting back to a pain-free life after Knee Replacement surgery. My videos and guides give you a step-by-step program that's easy and fun to follow. You'll be back to your active and enjoyable life in just a few weeks' time. Here's a small sample of what you'll learn:

- Why my program has 9 components... and why leaving any one of them out makes it much more difficult to recover and eliminate pain
- 10 different ways you can speed up your recovery after your Knee Replacement
- Why doing exercises you find on the Internet could actually RE-INJURE YOUR KNEE

Learn more at: www.KneeReplacementHandbook.com

Overcome Your Hamstring Injury

Could it really be THIS EASY to overcome your Hamstring Injury... completely on your own... without expensive physical therapy, drugs or surgery? My simple, 9-step program will erase your pain in as little as 7 days, and get you back to the full life you want. Videos, guides and photos give you the exercises and routines THAT WORK. Here's a small sampling of what you'll learn:

- Why massage isn't really helpful for Hamstring Injuries... and what is
- How to start decreasing your Hamstring pain in JUST MINUTES
- How to prevent future Hamstring Injuries

Learn more at: www.HamstringInjurySolution.com

Ankle Sprain Solved

Ankle sprains are common, and mostly a minor injury. But if they aren't properly rehabilitated, they can lead to more and greater injuries. My Ankle Sprain Solved program eliminates pain and properly heals your Ankle Sprain, so you can get back to an active and engaging life. Here are a few of the things you'll learn in the program:

- How decreasing stress and tension in your knees helps heal your Ankle Sprain
- What you need to do to PERMANENTLY heal your ankle... not just get a temporary fix
- The SINGLE most important exercise you can do to heal your Ankle Sprain

Learn more at: www.AnkleSprainSolved.com

Fix Your Frozen Shoulder

Frozen Shoulder is a common condition, but most health and fitness professionals treat it incorrectly. My program provides you with videos, guides and photos that explain this condition thoroughly, and give you a step-by-step, 7-component, 12-week program to follow that will completely eradicate your Frozen Shoulder. Here are just a few of the things you'll learn:

- The 3 most common mistakes people (and professionals) make treating Frozen Shoulder... which AGGRAVATES the condition instead of improving it
- Why stretching is an important part of fixing your Frozen Shoulder... but it's only 1 of 7 critical components in my treatment program. In my experience, the best results come when ALL 7 components are used.
- How my program is designed to provide lasting, long- term relief from Frozen Shoulder... not just a temporary fix

Learn more at: www.FrozenShoulderSolution.com

Iliotibial Band (IT Band) Syndrome Solution

IT Band Injuries are common for runners, athletes and active people. This video -based program helps you overcome IT Band Syndrome, eliminate the pain, and get back to your active lifestyle. Here are just a few of the things you'll learn and get in this program:

- A complete program THAT ACTUALLY WORKS – it has all the exercises you need, and none

that you don't

- Pain- relief techniques you can start using IMMEDIATELY
- A comprehensive explanation of how IT Band Injuries occur, and what you can do to prevent them in the future

Eliminate Stubborn Knee Pain (Patellofemoral Syndrome)

Patellofemoral Syndrome is a common condition that causes knee pain, especially for runners. Most health and fitness professionals are ineffective at treating this condition, so I created my Patellofemoral Syndrome Solution video program, which is backed by research and 16 years of hands-on experience treating thousands of people with knee pain. Here are just a few of the things you'll learn in my program:

- Why stretching DOESN'T fix Patellofemoral Syndrome
- How you can use common household items to perform all the exercises you need to ELIMINATE YOUR KNEE PAIN and get rid of Patellofemoral Syndrome FOR GOOD
- Why the order in which you do the exercises is important for success

Shin Splints Solved

Shin Splints is a common condition, especially for runners, but most of the advice out there for treating it is ineffectual. I designed my Shin Splints Solved program after 6 years at university, 16 years of personally treating clients, and careful scrutiny of 22 relevant medical research papers. This program is **HIGHLY -EFFECTIVE** at eliminating Shin Splints and shin pain. You **WILL** be

running again – without pain – before you know it! Here's just a small sample of what you'll learn in my program:

- Why ice and stretching are only temporary fixes for Shin Splints... and what to do instead to get long-lasting relief
- Why most trainers and therapists take a shotgun approach to prescribing more and more exercises, while I ask you to focus **ONLY** on the exercises you absolutely need (those that are most effective at eliminating Shin Splints)
- Why most health and fitness professionals don't have you strengthen your ankles... and why you **MUST** if you want to erase shin pain
